There comes a problem though.

You need to use force to move your mouse, and some of that is downward force. I don't know about you but I like to rest my paw on my mouse.

If you do this, it will defeat the magnets altogether unless you use magnets strong enough to repel eachother with a paw resting on it.

Then, with that, as soon as you take your paw off, you mouse shoots into the celing...

And the best part is when your paws are sweaty from a heated battle and it slips out of you paw and hit you in your face at 50mph...

I think this is starting to become a bad idea... Why not just use a black cloth instead?
