Dthdealer wrote on Thu, 03 January 2008 05:51Please no-one post here saying he is a hax0r. Singleplayer is the word that counts here.

You know how to use Level Edit? If so you can edit the mission havoc presets to blamo armour type. Then simply copy the objects.ddb to your data folder.

OMG THATS HOW YOU MAKE MULTILAYER HAX

Can't connect to WOL with objects.ddb in data folder.
Although there is a way around that. But telling that would truly be showing how to make multi-player cheats.

I've made creative sp hacks that way. Gotta love 10m jumping, rapid-fire green obelisk-ray shotgun armed holo-cane shredding m02

Lets not beat around the bush with words hey?

Trainer is just a other word for cheats.
