Not really, I have a 1.2 Ghz CPU and 256 MB Graphics card with 356 MB of RAM and on a cabel of DSL connection it works fine and I get no lag at all. So yeah it is not CPU intensive LAMO. Do you know anything you just said? No, on my old 1.3Ghz Duron, I had 15 FPS average on low detail, if you don't call that lag, then you are bonked in the brain. (Which you got from getting stepped on as a baby.)
