Yes, I have posted on their support forums, there are just some smart people here too...

I just installed ubuntu 7.04 from a live CD on a P4 w/ 1.5 GB of DDR 266 RAM, a maxtor 60GB drive and a radeon 9550 (it's supposed to function as a home server, it's just not booting)

Well, it is, kinda, it gets to the splash screen and then gives

udevd-event[1938] - run program : '/sbin/modprobe' abnormal exit

Any ideas, anyone? If I need to update a file, that's fine, I can use the live CD to boot the PC and mount the HDD, and I have a 4GB USB key to move things around with.
