The t1200 is an ancient DOS laptop I own and I have a problem with it. When I plug the cord from the adaptor in It flashes a orange light constantly, and won't turn on. I've tired it with no battery and the battery on and off. Still no luck.

I've googled it to no avail. This is an ancient laptop, and it's probably dead, but it has done this before and come out of it a few weeks later. Has anyone had any experience with this computer? Even the Toshiba site hasn't got any info on it.

The only site I can find anything about it is Old-Computer.com
