Okay, i apolgise if my problem has been sorted already but i kinda skiped a few chapters on this Topic.

My problem is,

I wanted to update my Scripts to the latest version, im fed up of joining servers and there going "Your scripts are okay, but get the latest version from bla bla bla.com".
So i used the Renegade Tool Manager(Usually quite a handy programme) to download the latest scripts.dll. Scripts.dll 3.4.4. But after doing this i got alsorts of errors, such as WWConfig poping up then when i interact with it in any way it crashes and quits the game!

After finally fixing this (via reinstalling) i have to yet again try and find those sneaky little files that make my maps load fast, cool EVA noises such as the Nuke/Ion countdown and icons above head when saying Radio Commands.
I have asked all over, downloading around 5-6 .zip files and none of them have been what i wanted.

Most of you are going, "Oh thats the CP1 & CP2 you want!".
Well, maybe it gives me icons above head but there is still no cool noises and still crap map load speed! Not to mention that crap rubbish font that some idiot threw in! It totaly ruins the game for me.

Please, im really annoyed here. My Renegade works fine, WOL is fine all is good. Except maybe 1 or 2 minor tweaks needed with config. I just want 4 things.

#1:Fast map load
#2:Icons above head when saying Radio Commands
#3:Added audio such as the Nuke/Ion beacon contdowns
#4:NO i repeat under no curcumstances! Any stupid altered font! Especially ingame!

Thank you for reading all this. Please, can anyone help me?
