Hello, I've recently started playing Renegade via First Decade again.

I've got the problem that it randomly freezes and then goes black. I get sound and if i Ctrl Alt Del i go back to the desktop at which point i switch to Renegade and it's fine again.

This is really starting to annoy me as i tend to play online and although it only takes 20 seconds-ish to get back, in those 20 seconds it's easy to be killed.

This is not only presesnt when playing online. i was playing Multiplayer practise and happened.

I'm running Windows XP.
