Ok heres the deal i was at my girl friends house and was on her pc and her and her family ain't smart at all when it comes to pc's i tried to copy some movies to there desktop but noticed it said need 300 mb free that the hdd is full but my computer showed it had over 100 gb free then i found the problem i don't know what the fuck they did but somehow the SYSTEM files got installed to the recovery partition so it has system files on the c drive and d drive (recovery drive) which explains why it says theres no space so my question is how can i get the pc to load up the pc on the c partition system files not the system files in the d recovery partition without fucking it up more

for the stupid ppl out there
C: drive and d: drive
d:=recovery partition
both have a desktop and system files
d load s windows when the c partition should =/

please help em fix this
