I get tired of looking at a low resolution R and trying to find decent sized ones without having to cut them out of another image. I created a 256x256 png file of the Renegade R, of course it doesn't look like the original, but for those who could use it, here you go:

I didn't really do a good job, but meh. Maybe I'll make improvements at a later time. I might make a high-resolution version (2048x2048) but I haven't decided yet.

August 13, 2011 Update
I was going to release the PSD and files originally back when I made this, but I don't have those files so I remade the R and am releasing these new files. It's not the best, but the community can do whatever with it.
