All I have is a simple orca skin just recolored.

I have made/used orca skins before and they worked, but now for some reason they just show up as normal orcas.

All my other skins (like 190+) are still working.

Also I don't know what this counts for, but I have an orca flame skin that is still working.

Here is a orca skin file that I made real quick to test, maybe somebody else could catch what I might have missed.
