Subject: FIX FOR "Requesting server listings" TIME OUT!!!
Posted by [REHT]Spirit on Thu, 24 Jul 2003 18:22:13 GMT

BlckEyesUgee that really helps, whats the files name dumbass :rolleyes: give me the exact name not what u call it

:rolleyes:

HOSTS (or hosts in my case, if you want to be picky about how it's exactly spelled) is the filename.... As it says in the qoute above, there's no extension, so it's not like HOSTS.txt or anything, just HOSTS . Do a search in your Windows directory or look yourself, that's the file name.
