Nikki, it's actually not that bad, at all. GM bought up the patent for it a few years ago, but now that it's in the hands of big oil puppets, it's not likely we'll see that used.

I didn't think it was patented. There are other processes to extract hydrogen that are slightly more efficient anyway.

The best way to get hydrogen will be through nuclear generation, especially with the 'pebble bed breeder reactor' where hydrogen is an actual byproduct of the fission process.

Even then, it looks to be that future automotive travel will rely on 'plug-in hybrids' , much like General Motors' Chevrolet Volt.
