FIXED

it was bad ass....

then yonnie fucked it up...

what i think happen is yonnie was a good player but then started cheating and needed to cheat to keep up his skill everyone knew he had

but now i know tons of people including mods on his own server that say they seen him use hacks and refill in field

i had friends tell me later they came in with hacks to use against him to watch him

like one time he ran somewhere where someone was going when no one was around and he followed the person go to another tunnel entrance then went back to the first spot and all this was on field the person watching him was on gdi and yonnie was in tunnels going where he was going but could not see him he has *cheat name removed*on

biatch caught him like 25 times and he says its lag.....and thats not even including the ss and fraps people have of him when the first yonnie cheating thing started

and now the servers dead and he says it cause they cant handle it when every one tells me is cause of him.....now he fired lot of good mods for bitch ones and fucked the server

now the admins run it all and they slow or never around now we got bad fucking rules sucky mods cause they took everything out cause they think ssgm has all these glitches when its really the way it should be

and irc is empty with like 6 people everyday 3 autojoin 2 are bots and ones 1 anyone else be happy if they join...

most mods and even normal players are long gone and xphaze went to hell....also including he wont run rg he wont run new scripts after he said he will then found out *cheat name removed*wont work on them and never ever will get them or test

and iv seen him hack myself hes a cool person in real life just some lay back redneck but in the gaming world hes trash which is ok for me cause idk about hackings because real life they could be the nicest person in the world

hope this helps idk if i can say it any better
