Well I got it to work so now BRenbot can detect the FDS. However, I host the server on a different log in name (for the computer itself) so that I can play Renegade as well as host the serer, but when I switch users to play Renegade it disconnects me and the bot from IRC. Also, how do you get the moderator status to work correctly, and if I turn off half-renguard mode will some of the RG commands still work, because for some reason when I run resurection I can't run Renguard. And lastly, how do you edit things like the vehicle and mine limit for each map?
