Ok.

In Windows, at idle.. I get a solid 60fps, and it never budges.

Running debian/wine, I get a solid 95fps at idle.

In Windows, during the game.. I get anywhere from 54-65fps.. and it never budges much past that.

Running debian/wine, I get 24-88fps..

It appears, at idle, wine runs it a lot better. But once you start getting a lot of characters/moving graphics, etc.. Wine just can't compare. I'm still not going to reboot to Widnows just to play the game. I'll just stay away from Infantry.
