Subject: Re: Crash in Game
Posted by yosh on Mon, 14 Jul 2008 04:33:44 GMT

I don't get it, I installed speed fan, and the game begins to crash per normal, but I have speed fan up on a secondary monitor, with task manager for good measure. Instead of the whole computer locking up, alt tab works a few seconds in. clicking back into the game, it locks up and closes itself (without crashing windows). Now when I play, nothing locks up. The GPU only hits about 62* C throughout.

Strange...
