Alright, enough bickering. I share the sentiment that Symantec makes shoddy software. I will look into Acronis as someone on IRC suggested that as well. Have any of you ever heard of or used DDRescue? Aparantly that is the best and its actually open source however it is too complicated for me to figure out. It's very linuxy. Also if any of you are subscribed to the Newegg newsletter theres a real nice Seagate 750GB HDD for 99$ with free shipping today only.
