To answer your question, no it isn't part of the cheat.

But just so you understand why they are all being pissy... it is because, if you are in fact telling the truth, your server's bot is an invasion of personal privacy.

It has no right to scan the player's C drives and report to you what it finds. Even if it is to stop cheating or not, it is not right. I strongly advise you to remove that function from your bot or else there is going to be a BIG problem later on in the lifetime of your server. It may even ending up costing you money.
