Not sure where I recall this from:

- If single name, autofill with fill name (now).

- If multiple names with same begining occur, fill in until the end of the common name, hit tab, continue typing the rest of the name and autofill will match according if there is a single match based on the letters, if not, repeat process.

Example:

{CLAN}MyNick
{CLAN}YourNick
{QQQ}Third

Type:
/{C
<Autofills 'LAN}'> - Hit tab and you are at /{CLAN}
Type in rest of nick /{CLAN}M
<Autofills 'yNick'> - Hit Tab and you are at /{CLAN}MyNick

Well, I tried to explain it. (Or I can be thinking Ren already does that, don't remember. in that care, just ignore me)
