Mauler wrote on Fri, 05 September 2008 03:11 I had this problem before. My viewer had been set to 16bit instead of 24bit as it should be, last time i saw that window was when you first load up W3D but for some reason i can't access that anymore and i have looked in my registry settings for the application but still no luck in changing it to 24bit?

Importing this should trigger that dialog window
