The thing, where you suddenly (not any vehicle collision, or infantry) 'fall' through the ground, ending in blue hell ('Fall', because you don't actually fall, but it seems to happen on your screen) + causing a MAJOR fps drop, ending in 1 fps (and for me, locked screens , where as i had to reset with XP, but Ctrl + Alt + del with vista worked though) and crashing the game / frozen screen.

Visual error right? ^ VisError2?
