"Rating may change during online gameplay."

It's up the the server owners to run a chat filter. I believe Adad released a tool that allows you to block messages containing inappropriate language defined in the configuration.

Oh, and by the way:
Quote:will der be a chat filter installed cause im black and hate racists so i think it should like auto ban for when a white person uses the n word

It's a double edged sword. The 'N Word' is just as derogatory when an Afircan-American uses it. To be honest, when people try to use their race as an excuse to be racist, it pisses the crap out of me.
