dunno if anyone will be able to help but whenever I load my ra2 it runs fine in the menu, then I start a skirmish it runs fine for a minute or so then crashes. Happens everytime, I have reinstalled several times, uninstalled clears registry and reinstalled and still same error.

Anyone experienced this or have any ideas about why it happens?

I always get a 'Ra2 has encountered a error, please visit www.westwood.com for technical help' message.
I run ra2 from TFD.
