Hi all, I recently installed RenGuard as I wanted to go on a RenGuard protected server (stupid of me yes I know). I tried starting up Renegade by double clicking on Desktop icon (like I usually do)and discovered this was not working. I then used the "Run as Administrator" option and the mouse icon then turned into the sign to show it was loading.....then nothing...If you haven't already guessed, yes I do use Windows Vista. I've un-installed Renegade and RenGuard twice now to try get it working but still nothing and every time I click the Renegade icon the message "Error Code 000005" appears. Please help and go easy, not very good with computer folders.

Thanks =)
