BeanyheadDanteactually, like i said, all i have to do is really make it portable, and make an installer for it, as well as quickly add mySQL support for it as i am sure not everyone has a copy of MS SQL laying around...

If you release this, I'll try to get about 20 servers be in one ladder. The Pits, Black-Cell, BeanyServ and any others that would want to join?

We could probably throw FoDSvr01 in to the mis for AOW, and then get sniper servers on another ladder. Crimson79, FoDSvr02, Snipe Open and others
