I voted Nvidia because;

Games now and days are made for nvidia cards. 9 out of 10 anyways.

ATi are prone to running at high temperature which is always a bad thing

ATi fail at making drivers for half there cards.

The SLi technology a year ago was really bad and there wasn't really any benefit from having it however they seem to have got it right. Look at there new card to rival ATi's 4780X2. Its basically two Nvidia GTX260's running in SLi and they kick ATi's ass.
