Subject: Get access and connected to xwis, but no server list...
Posted by rrutk on Thu, 05 Feb 2009 02:48:11 GMT

1. Accessing XWIS and playing Renegade online is no problem with game.exe (RenGuard-Version of Renegade).

At the computer of my girlfriend in LAN:

2. With game2.exe (without RenGuard for playing my mod), she got access to XWIS after loggin in. Got message "123 players online, conncted to usa server..."

3. But no server list

4. If she host a game, it doesnt show up in the gamelist of the other computer

5. If we try to make a LAN game, then she saw the game in the list, but was NOT able to join, nothing happend (yes, same map). If she sets up a game, I was not able to join.

6. game.exe and game2.exe are in the exceptions of the firewall, we have a router. but this should not be the problem, because with renguard all is fine.

7. The same problem (no server list without renguard) happend to me today too. but disapeared this evening like from ghosthands....????????????
