danpaul88 wrote on Thu, 19 February 2009 19:16Depending on the effect of the custom, that might not matter.

PS: What *does* that Auto_Save_Variable thing actually DO anyway? I have yet to find anything that actually explains it's function. How is it different to just having a variable inside the scripts class to store the value?

It's used to automatically save and restore certain variables should the script instance ever end up being saved or loaded.
