Who knows, maybe something running in the background was doing it, I know renegade used to always crash for me if Internet Explorer was running at the same time.
maybe firefox, i don't really know.. but now (with nothing running) it simply closes when i click export mod package

What comparability settings do you have on this thing, and what OS are you running (you might have said earlier), also, I still want a pick of the RenegadePublicTools/Leveledit folder contents, just to be on the same side and make sure this isn't something super obvious that we are looking over.
