Gen_Blacky wrote on Wed, 18 March 2009 17:48I have the windows 7 beta but you cant run anything on it yet and it has a few bugs that's probably why it was removed , it wont be for stable or compatible for a while.
Ehh.. I am using Windows 7 x64 on my main PC, and besides some driver issues with my onboard network card, it worked flawlessly ever since.
I am also using Windows 7 x86 on my Media Center PC. Again, no problems at all except for the onboard network card.

On the network card issue, I forced installed the Vista drivers and it worked. No problems ever since, which is better than Vista RTM.
