Have you tried downloading Scripts 3.4.4?(I am not sure that this would even fix it but it's good to have), you can also try going into "My Information" screen and setting your connection speed to Lan/T1(it's found on the left menu on the screen after you press "Westwod Online").

Another question comes to mind: what's you connection speed? go here to test it and post the link here(by pressing "copy forum link" and pasting it here) after you test it: http://speedtest.net.
