Are you using the newest scripts? If so Renegade's campaign doesn't like them very much and they are the cause of many problems with the campaign, go into your renegade folder and look for scripts2.dll(scripts2.dll is renegade's default scripts that work with the campaign) and rename it to scripts.dll and rename scripts.dll scripts2.dll.

When you want to go play online again just name scripts2.dll > scripts.dll.

This is all assuming your have Scripts 3.4.4.
