When I start the installation, everything goes fine until 13% installed. Then an error pops up and says "file system error: please insert renegade game disc." I can click retry but it just keeps happening. I dont get it, it installed fine the last time and the disc is not scratched!?!? Whats the deal here?

Matt

It's very possible that your drive is semi-broken and/or dirty.

It is RARE that your renegade disk is still in one peice from what I've heard. Renegade ahs to been put on the worst CD's EVER made.

My original Renegade disk from the year Renegade was released still works, and it sat in my CD drive for years in constant use because I never bothered to install a no-cd crack. Maybe mine happens to be an exception to the rule...

My original disk worked forever as well, but at some point last year, it wouldn't read anymore, so I'm using djlaptop's old standalone no-cd patch. It could just be some error with my computer, but I haven't bothered reformatting in a while, so I might get lucky and it might work again in the future.
