This is a video I made a while ago which shows me using the Auto Rifle and that I don't cheat.

Yo, how do get your videos in a way that people can choose for HQ @ youtube?

p.s. Could you hook me up with the white walls/ground for walls(flying)?
You mean snow walls?
Here is texture pack I sorted out.

On youtube it does it automatically as far as I know. As long as you have a high quality video.

Thanks m00nlite, i appreciate. Could you tell me which files i have to put in data to get my walls(flying) like yours?
