"Your installed version of Westwood Online is incompatible with this product.  
Please reinstall the Westwood Online component."

Yes, I know fixable by installing the APB fds,

my question is I always get this message when I install the TFD renegade and by mistake my stupid ass installed the 1.037 (srry if its wrong numbers) update, well I dont wanna reinstall it took me for ever to add everything I put into

so

1)is that what caused it?

2)is the APB fds wol components good? or are they might older version then the ones used for renegade that installs with them?

3) if anyone please can zip up there wol components folder with the dlls and any other files and upload them here and tell me where to place them...
