Why do you want to launch it through steam?

Its easier for alot of people who have all thier games launch through steam,Instead of having a
million shortcuts on your desktop.
Plus theres a chat you can use ingame,and can start groups and shit with chat rooms.
easier to find cws with I think.

I'll take a look at it (and probably fix it)

woot thanks,that would be great.
yeah but it eats your cpu you should just go get xfire

Hmm, eat my CPU (which I have plenty to spare) or randomly crash my game. I think I'll take the
first option.

EDIT:

I added Renegade to Steam via "Add non-Steam game..." button, pointed it to a Renegade install
with scripts 4, and I can confirm that launching Renegade via Steam does not crash on this Vista
Ultimate x64 install.
