Please reinstall the Westwood Online component."

Yes, I know fixable by installing the APB fds,

my question is I always get this message when I install the TFD renegade and by mistake my stupid ass installed the 1.037 (srry if its wrong numbers) update, well I dont wanna reinstall it took me for ever to add everything I put into

SO

- 1) is that what caused it?
- 2)is the APB fds wol components good? or are they might older version then the ones used for renegade that installs with them?
- 3) if anyone please can zip up there wol components folder with the dlls and any other files and upload them here and tell me where to place them...

I meant to tell you where to put it, anyways just add that folder named as internet to your C:\Program Files\EA Games\Command & Conquer The First Decade or your C:\WestWood "Dir" and away ya go.
