theres onother guy named 4ircraftkill0r who is useing ACKs avatar

you can play a flying map in mutiplay practice by going to your data folder and find the ini thats says like skirmish or something then where it says map00= or something like that type after it C&C_walls_flying , C&C_City_flying , or C&C_Glasher_flying , then when you go into mutiplay practice you can fly flying vehicals but there wont be an enemy AI so really its just useless
