---

npsmith82Start > Run > sndvol32.exe > Open your file.

Effects > Increase volume (by 25%)

File > Save.

Job done.

Oh, turns out i typo'd there.

I meant "sndrec32.exe".

Within windows...

1) Click the Start button.

2) Click Run.

3) Type "sndrec32.exe" and click OK.

Within windows sound recorder...

4) File menu, open your wav file.

5) Effects menu, choose "increase volume (by 25%)".

6) File menu, save your wav file.

Ferhagol want the sound to be louder without changing any of your computers volume settings

This will only effect the file you saved, it will not change any general volume settings on your computer.
