R315r4z0r wrote on Thu, 29 October 2009 15:32No, it is not what you are thinking it is.

The new DSi is exactly the same as the current DSi. The only difference is the slightly bigger screen.

This model is supposed to be marketed towards elderly people who have bad eyesight.

Because if you don't have bad eyes, you shouldn't use a screen larger than three inches. In fact, the monitor I'm using now is three inches.
