Hey, I've tried a lot to get scripts 3.4.4 to work so I could have more commands for listen server. I have gotten it to work a year ago or so but I don't understand, when it seems to work non of the commands work.

I simply don't know how to install it, I tried the installer also I think when I used that all my buttons diapered, like quit, settings, just the menu buttons were relocated and without names.

Oh, if this is any help for some reason I'm using the Decade.
