It's not really the scripts in this case, it's just what keys are set to do what with keys.cfg. Also, the RP2 scripts (scripts.dll) are a modified version of Scripts 3.44, nothing more really.

Try renaming your current keys.cfg (from RP2) to something else and placing the attached keys.cfg (from Scripts 3.44 with a few added keys) in your data directory.

Additionally you could just replace the current taunt actions with:

Quote:

Taunt1=Keypad_1_Key

Taunt2=Keypad_2_Key

Taunt3=Keypad_3_Key

Taunt4=Keypad 4 Key

Taunt5=Keypad_5_Key

Taunt6=Keypad_6_Key

Taunt7=Keypad_7_Key

Taunt8=Keypad_8_Key

Taunt9=Keypad 9 Key

You could just download Scripts 3.44 again and get it from that also.
