Budget, Im using my graduation money, anyways i read up about ASRocks and they say they suck. so not sure which of the two to choose from

Where exactly did somebody say AsRock sucked?

It depends who you ask. Plenty of people say Asus, and MSI suck, too. It's not as if they're wrong or right, but they're in a real minority.

You have to realize that if people are happy with a product, they're often too busy enjoying it to not write about it, whereas someone who has a bad product will complain, and do it a lot.

I've also found that a lot of people who say a product sucks, like a motherboard, often haven't done their homework, and their problems may have been their own fault. This is often the case with Newegg reviews.
