danpaul88 wrote on Wed, 20 October 2010 17:38For the millionth time, BRenBot doesn't LOAD anything, it just sends RenRem commands to the FDS which CANNOT crash it.

If your server is crashing then there must be a bug in RR which is causing it to flip out and explode. Perhaps it's trying to hook into the RenRem data recieved from BRenBot and is crashing in the process. Go ask whoever coded RR to fix it or stop using it. Simple.

RR does run fine.
