Subject: Importing your own Gmax file as a preset

Hello,

I've been using scripts and making maps for some time, but I've never worked with Gmax. Now I've made my own Gmax file. It's the floor-plan of Mission 10:

Now I want to import this to my own made map as a preset (Mission 10 but then multi-player and much more fun). In the mission GDI has to destroy the base. NOD is inside a place where GDI can't come, with this floor-plan on the ground (in big, about 5 meters in length). NOD will be able to see where the GDI player(s) is/are on this floor plan. Each time a GDI player enters a zone, a small black dot will be made on this floor plan on the place where the GDI guy is. When GDI walks for a while, the NOD players will see where GDI is and will then be able to teleport to them. So I need this floor-plan be imported in the map (big and moderate/high quality) as a preset. Can someone explain me how to do this? If there is an easier way to to it, please tell me.

Thank you in advance,  
Kind regards,  
Sauron
