The request could not be performed because of an I/O.

This could be hardware failing our a bad cable. If its the hard drive it could just need a good format not quick but a full format.

You should be having several problems with your computer if that's the case and sounds like you are.

Quote:I used two different ones; Daemon Tools and Poweriso. Both didn't work.

I use both of those programs on windows 7 and they work great.
