I used to have XCC Mixer 1.46. Someone was using Teamviewer on my computer, messing with xcc. That person had tried to drag some files straight into my xcc's renegade always.dat. This crashed xcc, and now I can't get it to work. I have uninstalled several times, and re-download/reinstalled several times. Today I even downloaded and installed xcc 1.40...and it STILL won't work.

Anyone have any ideas? I can't skin or anything without my xcc, and its getting really annoying to have to ask people to extract this, and extract that, and send the files to me.

Thanks,
-Hego64
