hey ppl i had resently a problem whit my ren, it got fucked up rofl, started to crash every time i leave a game and lag in multiplayer has in singleplayer like 2 days ago, i discovered the reason of that was the scripts 3.44, dont know what hapend, it use to worck fine, after uninstalling and intalling again the problem remain so i tryed to restore the system to 3 days before this, then i intalled again ren and internet components, updated to 1.37, and worcks fine but if i intall scripts 3.44 again, gess what! scripts still lag in game and crash my ren when i leave, if anyone have any ideas please share it whit me lol, thanks for advance.

PD:and if anyone is interested in take a look, here i is a crash dump of the herror i had back when this began.
