Subject: Re: Post scripts 4.0 code questions here
Posted by sycar on Sat, 10 Sep 2011 00:08:31 GMT

sycar wrote on Fri, 09 September 2011 00:41I can compile scripts.dll but the file is 5054kb where as the one shipped with 4.0 is only 2593kb. If I run the self compiled dll the FDS crashes on startup.

Crashdump avaliable, just too big for upload.

Thanks

I have since spoke to StealthEye about this, who's said theres currently an issue with the source if you run it in "debug" mode but dont't have a debug edition of tt.dll. To solve the issue I just had to change it to a "release" edition when compiling.
