Ha ha, thanks!

I already downloaded the 3D Soundback thinking that should be it, but it didnt do anything. Even when i try to load it, nothing happens.

Anyway, i followed your instruction:

1. Copy 3D Soundback files to Renegade folder
2. Rename game.exe to wwconfig.exe
3. Load renegade

Got this...

Toggle Spoiler

I actually LOL'ed at how simple that was and I have no idea what the point of renaming game.exe to wwconfig.exe is but it worked. I changed them back so the TT Launcher can work still.

Only problem is I dont have the one i wanted, the A3D driver. The files are in the renegade folder, it obviously doesnt want to load them still.

Do you get this on your setup?

The image shows a Windows 7 desktop environment. The main window is 'Computer', displaying a list of drives and folders. On the right side, a 'Renegade Config' window is open, showing audio settings for the game. The 'Renegade Config' window has three tabs: 'Video', 'Audio', and 'Performance'. The 'Audio' tab is selected, showing a list of audio drivers with 'Creative Labs EAX (TM)' selected. Below the driver list, there are checkboxes for 'Sound Effects', 'Music', 'Dialog', and 'Cinematic', all of which are checked. At the bottom of the 'Renegade Config' window, there are settings for 'Quality' (set to '16 Bit') and 'Playback' (set to '44 kHz'), along with a checked 'Stereo' option.
